Art Unit: 2815

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 12, 32-34 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The component interconnection in the claims lack clarity.

In claims 12, "curved side" has no antecedent.

In claims 32-34 it is unclear what is meant by "precision electronic equipment" and where this along with the sliding portions have basis in the disclosure.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-5, 7-12, 14, 16-19, 21, 24, 25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lee.

Lee teaches the provision of using aluminum in column 1 discussion of the prior art. Although the invention of Lee is primarily discussed relative to the use of copper, the substitution of aluminum for copper is well known in heat sink technology as established by the prior art teachings of Lee. Figure 3-10 therefore as applied to copper can be equally applied to aluminum.

Art Unit: 2815

Lee shows a semiconductor device having a chip 70 having pads 73 coupled thereto. The back surface of said chip is formed a heat radiating electrode 71 of titanium coupled to a heat radiating substrate 81. Figures 7-10 show variations of the metal films layers recited in the claims whereby figure 7 shows heat radiating substrate having a first metal film of Au coupled to said heat electrode by a adhering materia having thermal conductivity (i.e. palladium). Other views also show the use of nickel.

Claims 1-5, 7-12, 14, 16-19, 21, 24, 25, 32-34 are rejected.

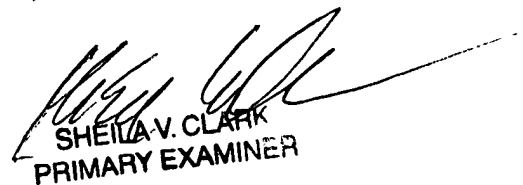

Claims 6, 13, 15, 20, 22, 23 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Examiner S.V. Clark whose telephone number is (703) 308-4924.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Eddie Lee, can be reached on (703) 308-1690. The fax phone number for the organization where this application or proceeding is assigned is (703) 308-7722 or 7724.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0956.
